

Relationship Between Nutritional composition and Popularity of a Recipe

A Linear Approach

Milad Afrasiabi
September 2021

Can nutritional composition of a recipes contribute to its popularity?

Is it possible to explain it using a linear model?

Nutritional Information		×
Kim's Lasagna		
Servings Per Recipe: 10		
Calories: 594.3		
		% Daily Value *
Protein:	41.2g	82 %
Carbohydrates:	43.4g	14 %
Dietary Fiber:	4.6g	19 %
Sugars:	9.6g	
Fat:	29.1g	45 %
Saturated Fat:	13.9g	69 %
Cholesterol:	115mg	38 %
Vitamin A Iu:	1591.8IU	32 %
Niacin Equivalents:	13.6mg	105 %
Vitamin B6:	0.5mg	30 %
Vitamin C:	18.1mg	30 %
Folate:	95.1mcg	24 %
Calcium:	646.5mg	65 %

Data

- Rating and nutritional information of 1760 dinner recipes extracted using Beautiful soup
- 260 were discarded due to website format irregularities
- Outliers were removed using EDA
- 1472 rows of data were selected for final analysis, 18 original features

Target:

Rating

Original Features:

- Protein
- Carbs
- Fibers
- Sugars
- Fat
- Saturated Fat
- Cholesterol
- Vitamin A
- Niacin
- Vitamin B6
- Vitamin C
- Folate
- Calcium
- Iron
- Magnesium
- Potassium
- Sodium
- Thiamin

Methodology

1800 recipes scrapped, 300 discarded as irregular, outliers removed

Data divided 80/20, train vs. holdout
(scikit learn model selection package)

Feature engineering and addition
30 in total

Train data divided to 5 CV groups
(using scikit learn KFold package)

OLS, Ridge, LASSO and Elastic Net models
fitted and scores averaged

Best models were selected and
tested on the holdout set

Model Selection

$$\text{OLS-R}^2 = 0.066 \pm 0.048$$

$$\text{LASSO-R}^2 = 0.063 \pm 0.041$$

$$\text{Ridge-R}^2 = 0.067 \pm 0.043$$

$$\text{ElasticN-R}^2 = 0.066 \pm 0.042$$

Results

Average on 5 validation sets:

$$R^2 = 0.059 \pm 0.032$$

Trained on whole data, scored on test:

$$R^2 = 0.059$$

$$\text{MAE} = 0.162$$

Key Features:

- ◆ Protein
- ◆ Fat
- ◆ Cholesterol

Can nutritional composition of a recipes contribute to its popularity? *Maybe!*

Is it possible to explain it using a linear model? *Hmm...*

- Adding non-nutritional features
- Using non-linear models (Decision Trees, Random Forest, etc.)
